

To Whom it May Concern:

I am interested in the Senior Web Developer position at Balihoo. I have the necessary skills and drive to be successful in this position.

I have been developing web based applications for 9 years. In my current position I develop applications in both Ruby on Rails and PHP for various departments at Oregon State University. Over the years I've helped to produce applications in many industries including: health care, health insurance, e commerce, real estate, and education. These applications have had a wide variety of features and have interacted with other systems in a variety of ways. I have experience using both svn and git. I've produced rich web applications using both Adobe Flex (granted it's been a few years) and JavaScript. I have been involved with every aspect of application development including gathering requirements, software design, development, testing, deployment and maintenance.

In addition to my technical duties I have also been a leader at Oregon State and have helped to implement many positive changes in our development process including: moving towards agile methodologies, creating documented coding standards and performing peer code reviews.

Thank you for reviewing my application materials, I look forward to hearing from you.

Sincerely,
Matt Hansen
